

## SIP Unification FABS

### Unification Features

- SIP capability to all IP and analogue PBX's
- All handsets become ON-NET
- Compatible with MPLS WAN
- No new numbering needed
- Can use ISDN for resilience

### Customer Advantages

- Replacement of traditional CPS with IP minutes
- Enables dual network voice and data
- IP voice termination or ISDN as backup
- Legacy PBX converter extends PBX life
- Fewer business relationships need to be managed

### Customer Relationship Delivery

- Facilitate implementation
- Less dependent on Carriers for telephone
- Centralised control of the dial-plan
- Measurable end-to-end control of SIP with SLA's & SLG's
- One bill for all voice communications office and remote sites

### Customer Benefits

- Reduced call charges as IP minute rates are cheaper
- Reduction of infrastructure and usage costs
- Enhanced resilience as the PBX can connect to the SIP Gateway and ISDN
- Cost effective delivery of SIP and MPLS to home worker
- Risk free technology implementation with new functionality
